## Line Speeds

Connection speed is NBN Speed 4 †

† The download and upload speeds stated are the maximum that each type of link can deliver and will rarely, if ever, be achieved by any user for all sorts of reasons. SJH makes no guarantees of any kind on the actual speeds that will be achieved by any individual users as we rely on our suppliers to ensure services are provisioned to deliver optimum speeds at all times. Speeds that customers experience on these services in practice have tended to be affected by the following internal and external factors:

- The type of content being downloaded by the end-user.
- The connection method within the premises (wireless or fixed).
- The end-user's network, operating system, hardware, software and software configuration (E.g.: router/firewall configuration).
- The number of individual end-users at a residence using the service at the same time.
- The source of the content (the destination host) being downloaded (including any content server limitations).
- Network contention or congestion in any of our supplier's networks.
- The quality of any copper network component.
